

AquaLogic Interaction – Portal Administration Concepts for Developers

Duration

8 hours

Description

This preparatory course for developers is a collection of topics, taken from the Foundations and Administration courses. It's important for developers to know how the basic system works and what is possible before beginning custom development. There are no hands-on exercises in this self-paced course. Students should go through this course, at a minimum, prior to attending application development courses. If you require more in-depth coverage of the portal and its administrative components, we suggest that you attend the full Foundations and Administration courses.

Target Audience

- Developers

Do not attend this course if you have taken 6.0 Foundations and Administration or Portal Admin Concepts for Developers in 5.0

After this course, participants will be able to:

- Identify the products in the AquaLogic User Interaction product set
- Describe the basic features of the portal (navigate, customize experiences, search for content, people and other items)
- Describe the different types of people that are involved in the implementation team
- Explain how portal security works (Access Control Lists, Activity Rights Roles)
- Explain how users can be imported from other data sources and their profiles customized for use with custom application development
- Explain how jobs work in the portal

Prerequisites

- Basic Windows operating system administration experience
- Familiarity with LDAP servers

Available in these Delivery Modes

- Self-paced eLearning
